Subject: Statement regarding Heartbleed bug for Thales e-Security SafeSign Authentication Server product.

Dear Valued Thales Customer:

In response to the "Heartbleed" bug affecting the widely used OpenSSL software, please find below our statement of position for the Thales SafeSign Authentication Server product.

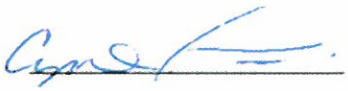
Summary:

- Thales does not ship or use OpenSSL with the SafeSign Authentication Server product.

The Heartbleed bug leverages a vulnerability in the OpenSSL toolkit which is used in many software products to implement TLS and SSL. The Heartbleed bug uses this vulnerability to get the device with which it is negotiating a TLS/SSL session to return an area of its memory. More detailed descriptions of the Heartbleed bug can be readily found on the internet.

If you have any questions regarding the subject matter of this letter, please contact Thales through your customer support or account management representative.

Yours sincerely,



Cynthia, Provin, VP Global Strategy & Marketing, Thales e-Security Worldwide
